

eShare Health User Group

What can the User Group achieve?

We have always believed that technology is the key to achieving better governance.

The User Group is exclusive to our clients and has been established to bring together our clients to help develop further applications of the system. Together we can discuss the issues they face and work to develop new ways in which eShare can help to overcome the problems.

The ultimate goal is to create a solution which really works – designed for healthcare trusts by healthcare trusts.

Who is it designed for?

The User Group is exclusively for our clients and all users are welcome to attend.

What topics are covered?

The User Group focuses on current issues which trusts are facing and looks at how our either our current modules – eKnowledge, eMeetings, eDecisions , eView and eControls – can be developed further, or a new module created, to help overcome the issues.

The User Group is also used to showcase new developments at eShare Health and demonstrate how they can be of benefit to our clients.

Do users need to attend every session?

There is no requirement to attend every session. Any member who is unable to attend will be kept up to date with the latest developments, and should you wish, we can always visit you and provide a personal demonstration.

How much does it cost to attend?

Attending the User Group is Free.

Where can I find more information?

More information about the User Group can be found on our website: www.eShareUK.com We have also created a portal which contains further details and is only available to our clients. This can be accessed through our website and you will require your eShare Username and Password to log on.

User Group

eShare currently contains 5 modules:

- eKnowledge
- eMeetings
- eDecisions
- eControls
- eView

The eShare User Group enables our clients to work with us to develop the system further and create additional functionality to help tackle the issues their scheme faces.

The ultimate goal is to create a solution which really work
